For a correct adjustment of the relief valve on the remote hand pump please refer to the following procedure:

A) Close the gate of the main valve on the power unit
B) Loosen the locknut of the relief valve (D) paying attention to not empty the suction pipe. In case of emptying of the suction pipe please repeat the fitting procedure
C) Screw the adjustment screw (V) in order to obtain the oil discharge when the pressure is 2.3 times the maximum static pressure of the system. If the adjustment pressure value is exceeded:
   • Acting on the VMD of the main valve
   • Unscrew backward the adjustment screw (V)
   • Repeat the adjustment procedure from the point C)
D) Tighten the locknut (D) locking the adjustment screw (V)
E) Open the gate of the main valve on the power unit
